Problem Statement:

Managing a cricket league is robust task for a cricket board. Till date this event is not fully virtual. It may be difficult for players and teams to register themselves with the cricket board in certain times. For solving this problem, we are creating a cricket league management system for the sports board which is used by the cricket board to conduct a virtual auction and manage the whole league in terms of venue selection and scheduling matches, player payment, allotment of points and declare the winners. The whole event can be managed on a single virtual platform.

Objectives:

- The team owners who want to bid for a particular player can bid from anyplace and anytime because the system is fully functional 24/7 when auction is going on.
- Access Restrictions: Only registered teams can place bid on the players who are registered.
- The system is available for anyone who want to view to auction with only “view privilege”.
- A team owner can search for a particular player and check his availability and manage their team.
- Salaries for the players are done using the same platform.

- Every user of the system will be authenticated and they have access privileges to access the information.
- Every user can view the stats of each team, player.
- Cricket board can manage the whole event on a single platform.
- Ticket payments from the spectators to the respective stakeholders can be maintained here

Present System:

The present system which is an offline system involves team management attending auction which is held at a particular venue in a particular time, maintain the record of a player and bid for him. A player needs to convey his availability to the cricket board(including foreign players). Also it is not easy to manage the whole event which involves finalizing the venues/home grounds, maintain the player statistics of every season, bid information, maintain the list of sold/unsold/retained players, trades between teams, replacements . The whole process is time and money consuming. Moreover team owners need to travel from across the country to the venue. Also external users(public/fans) who wants to view the auction in real time cannot attend the event. There are also many others problems that management might face while organizing such a large event.

Proposed solution:

The proposed “Cricket League Management” system is an online portal which is build with a goal of managing a whole cricket league from conducting auction to declaring the winner. Owners and players gets registered into the system and the system is available 24/7, so the owners can bid on the players from any place and anywhere which saves a lot of their time and money. Teams owners can use this system to track the budget/bidding amount/fee paid to the player, search for a particular player, monitor player/team performance, get venue information, perform statistical analysis of players, etc. Players can use this system to register and take part of the auction, keep track of their statistics, get information about venues, etc. The users(public) can access this system to get live updates about the auction and the league, know the statistics of a player, etc. The cricket board can use this system to maintain the bid information, player statistics, list of sold/unsold/retained players, venues information, team/players history in previous seasons, etc. Only authenticated owners/players can take part in the auction. The database keeps the information about the auction, player history, player/team statistics, venues, etc. There is also an administrator for the whole system who add owners/

players, set the bidding amount limit, decide the venues, track the auction, manage the players entry(eligibility) into the auction, etc. The system has strong user authentication.

Business Rules

- When a user registers, they will select their type which is owner, player or spectator.
 - The user type cannot be null (NOT NULL).
 - Password will be in encrypted format.
 - User ID is the primary key
- Every Owner can have only 1 team.
 - The Budget for each team is 50 crores.
 - Team Name cannot be null (NOT NULL).
- User ID is the foreign key.
- Unique constraint is enforced on owner_id field.
- Every Owner can bid on multiple players.
- The Owner who bids the maximum amount for a particular player gets them.
- IS_FINAL_BID is updated to true for the latest entry once bidding is completed indicating that the player is sold.
- Bid ID is the primary key and Owner ID, Player ID are the foreign keys Payment is made to the player after bidding is confirmed.
- Payment (Final BID amount) is processed when IS_FINAL_BID is true.
- Payment ID is the primary key. Bid ID, Player ID are foreign keys.
- Every player has a base price
- Owner can place a bid on a player for an amount which is more than the base price.
- Player has a country which determines if he is a foreign player or a domestic player.
- Player ID is the primary key.
- User ID and Team ID are the foreign keys.
- A Team can have a maximum of 25 players
- Player Name must be unique and not null.
 - Team ID is the primary key. Owner ID is the foreign key.
- A team will have a home ground.
 - Team Name must be unique and not null.
- The winner is the team with maximum victories(Highest points).
- Team standings table is updated based on the fixture
- League ID, Match ID, Venue ID are the foreign keys in the Schedule Table
- Match Date should be within the FROM and TO dates of the League.
- Details of the league matches held till now are stored in the League Table

- League Name cannot be null.
- League ID is the primary key which indicates the year in which the league is being held
- Cost of the ticket is based on the type which the spectators choose.
- There are three types of tickets. PLATINUM (100 USD) , GOLD (50), SILVER (30)
- The maximum tickets which can be sold is based on the capacity of the venue Each Spectator is allowed to book a maximum of 20 tickets.

Views:

- To view players in a team with their sold price and type

Team_Players - Player_name, Bid_Amount, Player_Type, Country

- To view full schedule of the cricket league (List all the encounters between teams)

League_schedule - Team1, Team2, Venue_Name, Match_Date

- User ticket booking view (Show a ticket after booking is complete)

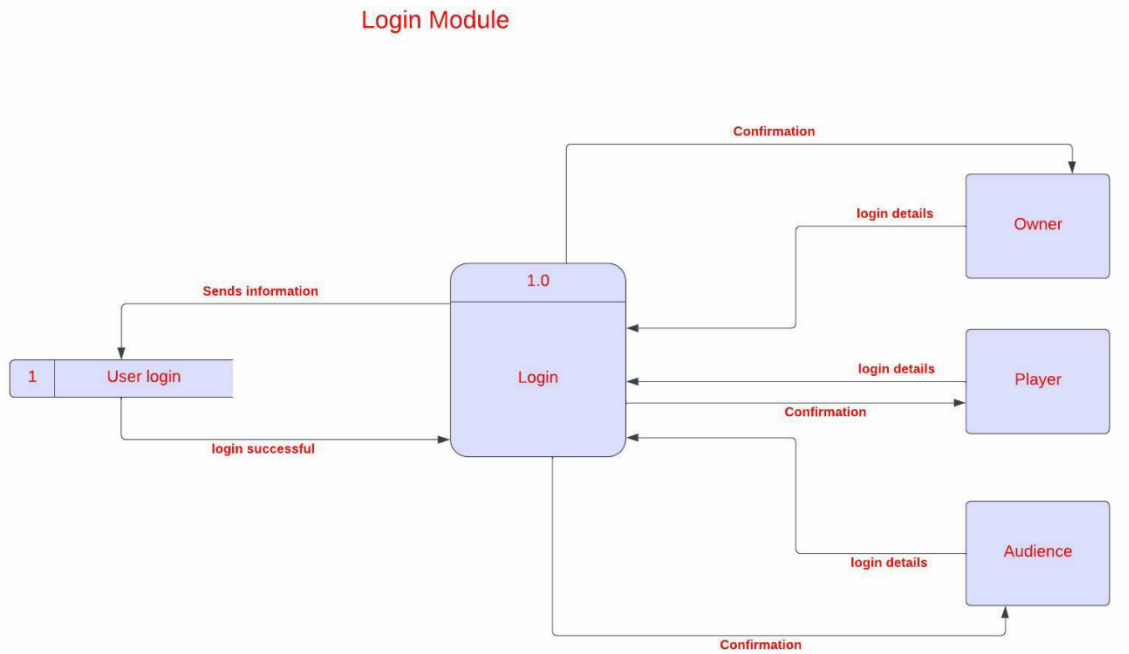

Ticket - Name, Match(Enounter), No.of tickets, Total_price

- Bid payment view (Owners manage payments to players after the auction)

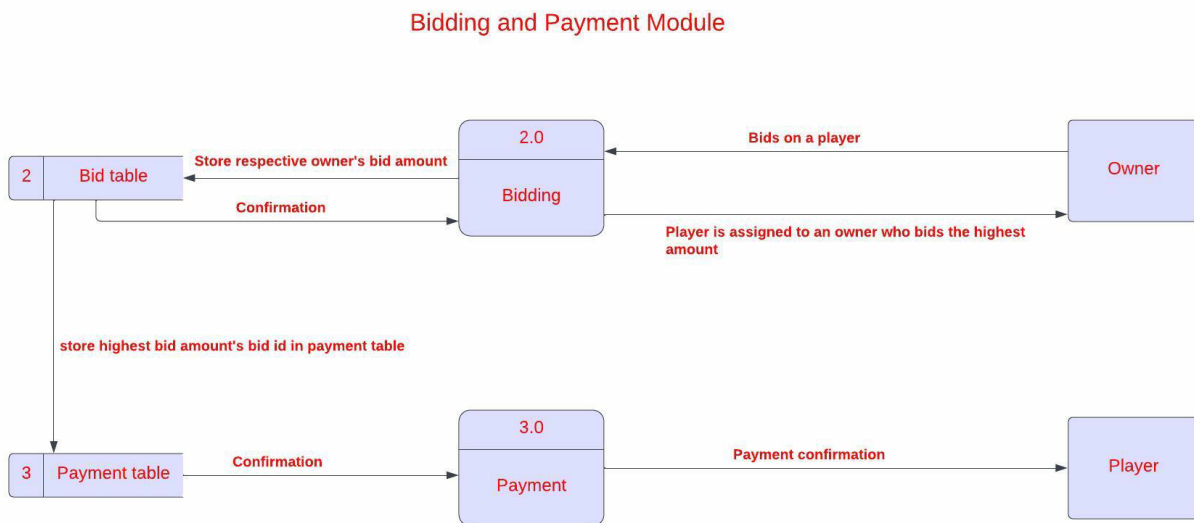

Bid_payment - Player_name, Amount_Paid, Payment_id

Data flow diagrams:

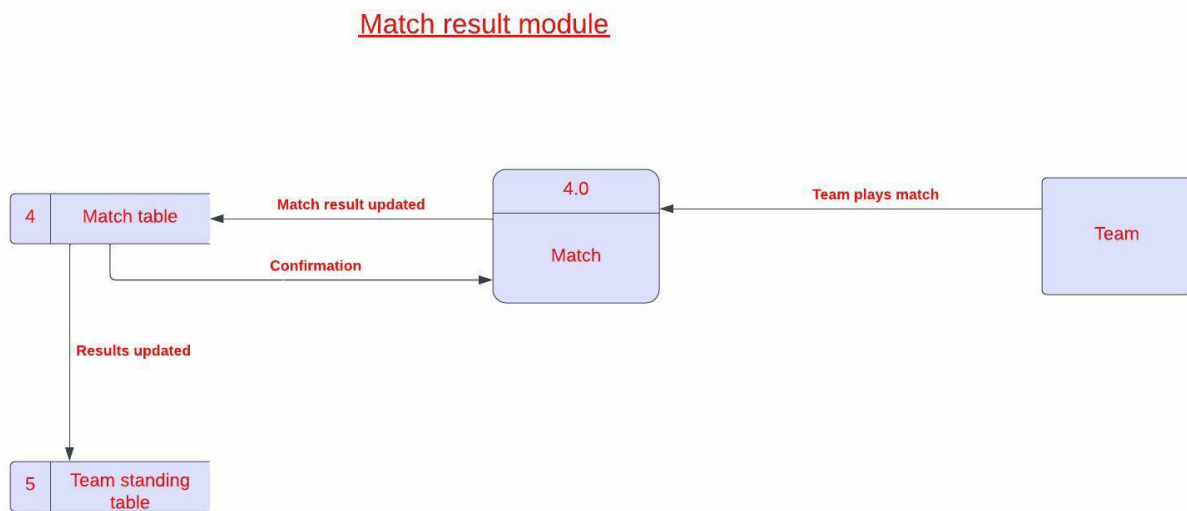

1. Login module

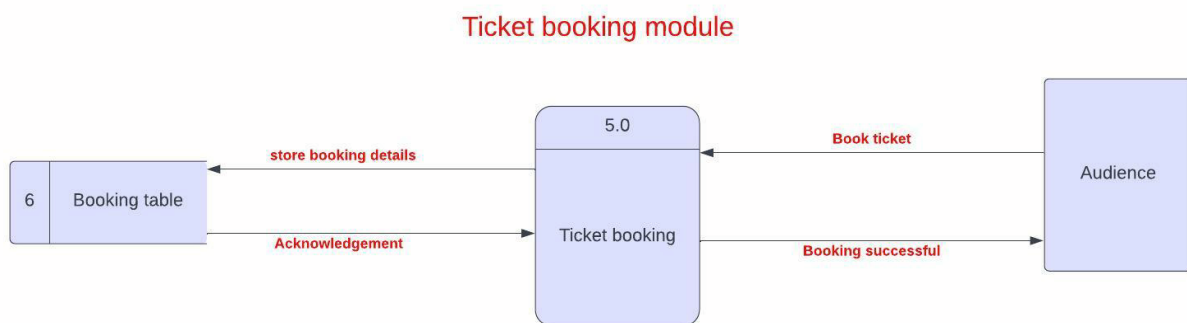

2. Bidding and Payment module

3. Match result module

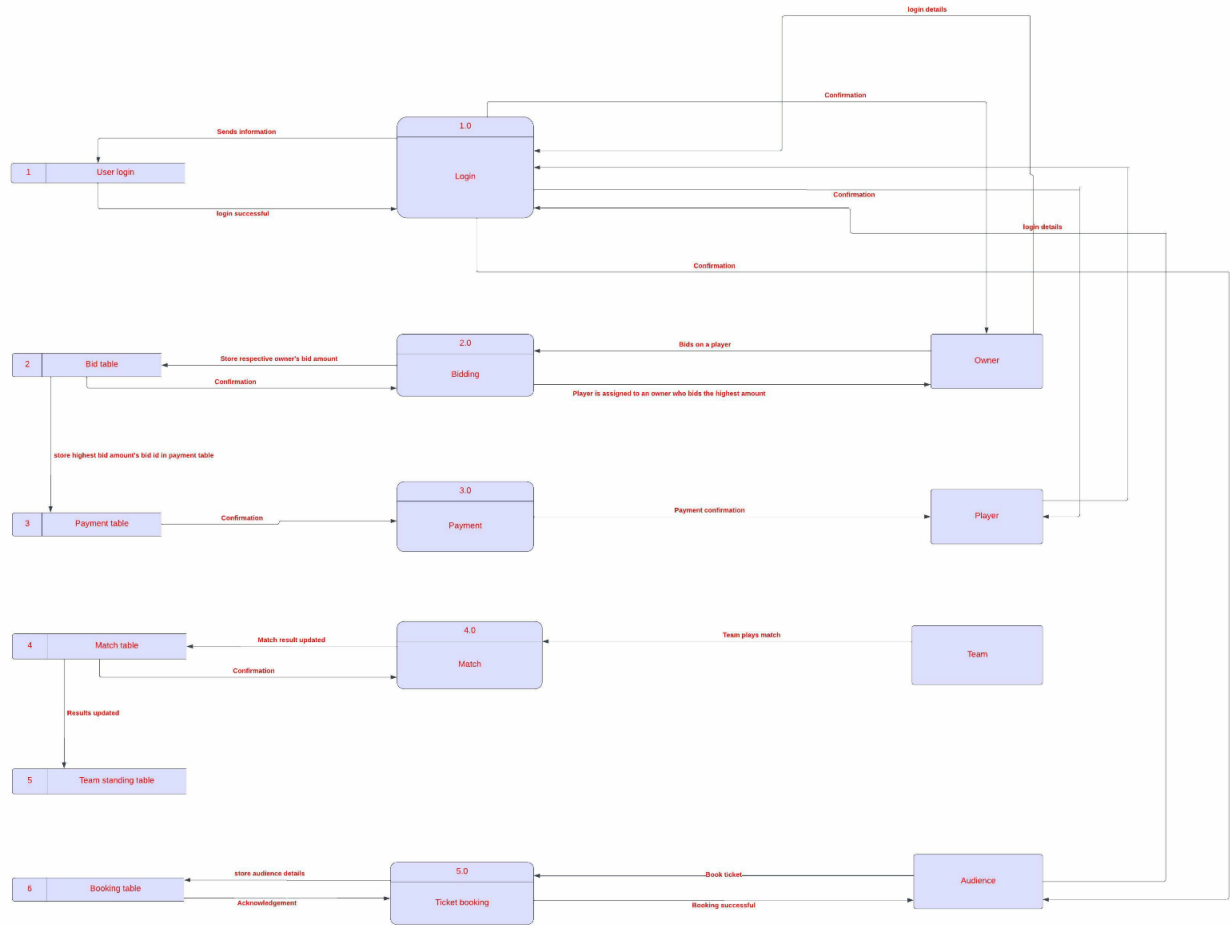

4. Ticket Booking module

Complete process workflow (Data flow diagram)

DATA FLOW DIAGRAM

Security (User level access, permissions) INSERT/ UPDATE/ DELETE/ VIEW

In this project, we have created 3 different users from admin – mohith, supraja, Saketh

Create user <username> identified by <password>

Granted create session privilege to all the users from admin

Grant create session to <username>

We have created all the tables in Admin and gave different privileges (CRUD) on different tables to three users. Each user has different permissions on different tables.

User - Admin:
